Hyeon Woo Lee

607-379-5619 / hyeonwoo610@gmail.com / lhw610.github.io / *US Permanent Resident*

Specialized in building robust AI systems for data-scarce, high-stakes deployment environments.

EXPERIENCE

Senior Staff Data Scientist | GE Healthcare April 2026 ~ Current

- Technical lead for a team of 5 data scientists developing autonomous X-ray systems, with hands-on development of the core feature, auto FOV estimation, and contributing to regulatory documentation and study design.
- Architecting digital twin simulation environments on NVIDIA Isaac for autonomous X-ray systems, directing data requirements and outputs to reduce reliance on real clinical data.
- Designing a teacher-student semi-supervised domain adaptation approach to train models on simulated data, partnering with the simulation team to improve data quality.
- Driving cross-functional collaboration across GE HealthCare and NVIDIA technical partners, co-developing the simulation pipeline and establishing shared technical standards.

AI Research Engineer | Philips July 2020 ~ April 2026

- Lead AI product development for Philips Ultrasound systems (*Lumify*, *Compact 5000 series*, and *Flash 5100*), enhancing real-time diagnostic capabilities for 2D and 3D ultrasound (*510(k) clearance - K252558*)
- Developed and deployed real-time (20 ms) on-device detection and segmentation models (serving with ONNX, TFLite) for FAST trauma exam guidance and an automated reporting system.
- Developed a large language model (LLM) pipeline for instruction prompting, retrieval-augmented generation (RAG) and fine-tuning to standardize unstructured ECG free-text, leveraging vLLM and TensorRT-LLM for faster, optimized inference.
- Designed and trained a transformer-based self-supervised representation model for ECG signal classification.
- Built and maintained data engineering and model validation toolkits to support high-quality data curation and rigorous model evaluation workflow aligned with clinical and regulatory standards.
- Contributed to FDA 510(k) and De Novo submissions by participating Q-Sub meetings and validation study designs. Authored key documentation, including device descriptions, clinical study reports, and AI software summaries.

Scientific Data Engineer | Allen Institute, Cell Science group July 2019 ~ July 2020

- Developer of the *Allen Cell & Structure Segmenter*, an open-source toolkit for microscopic cell images, focusing on computer vision and iterative learning workflows.
- Developed deep learning-based mitotic cell pair detection model and worked on a generative model for 3D image transfer across magnifications and resolutions.

TECHNICAL SKILLS

- **Programming Languages**: Python, C/C++, SQL, HTML/CSS.
- **Frameworks & Libraries**: PyTorch, TensorFlow, HF Transformers, vLLM, OpenCV, ITK, Matplotlib.
- **Tools & Platforms**: Docker, AWS, CUDA, MATLAB, Git, Linux.
- **Model Optimization**: Quantization, Pruning, Distillation, Model Conversion (ONNX & TFLite & TensorRT)

EDUCATION

Cornell University, Ithaca, NY May 2019
Master of Engineering in Biomedical Engineering
Research: Semi-supervised image segmentation (Presented at NeurIPS ML4H). Advised by Dr. Mert Sabuncu

University of Rochester, Rochester, NY December 2017
Bachelor of Science in Biomedical Engineering
Specialization: Signal processing, Machine Learning
